

Mainframe modernisation to Microsoft Azure

with Fujitsu

It's possible to maximise the benefits and minimise the disruption of mainframe modernisation with Fujitsu and Microsoft.

50% reduction in total cost of ownership after moving to Microsoft Azure.

70% of IT decision-makers believe that less than half of their current applications can support the future digital strategy of their organisation.

40% of mainframe experts are on the verge of retiring.

Why now is the time to modernise to Microsoft Azure

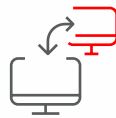

Moving on from mainframe to Azure delivers a number of benefits

Reduce costs

Be more agile

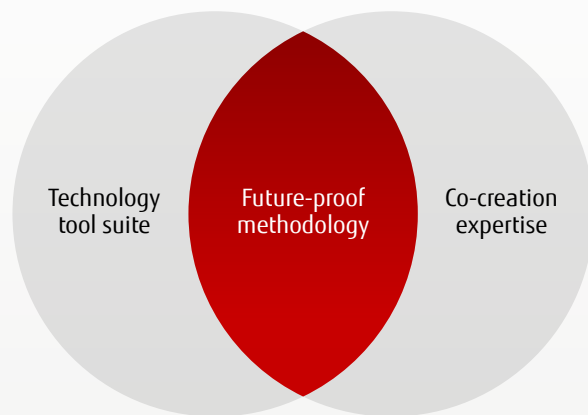

Access new technologies

Avoid an ageing workforce

Transform your business

Fujitsu's wholly owned and unique technology suite combined with an extensive global network of experienced industry experts, come together into an end-to-end mainframe modernisation methodology.

Technology tool suite

Our tools are wholly owned by us. This reduces the complexity and cost of modernisation, as clients don't have to deal with third parties or pay additional licensing fees.

Co-creation expertise

Our range of skills and collaborative approach means we don't 'modernise and leave after a project. We foster the relationship and deliver continual innovation and success.

Future-proof methodology

Our ability to make ongoing code changes, reduces risk and the need for change management. This speeds things up, without disruption.

Microsoft and Fujitsu – the perfect modernisation combination

Microsoft Azure is the perfect platform to modernise to

Hybrid by design

Microsoft Azure is hybrid by design which means it interoperates with the data centre perfectly.

The most secure platform

Significant ongoing investment in security with the most comprehensive compliance portfolio in the industry.

Access advanced analytics and AI

Avoid disruption and take advantage of advanced analytical tools like AI, machine learning and IoT.

Modernisation expertise delivered by the Application Modernisation Team
